Spill Containment **PALLETS**

A **spill pallet** is a banded secondary containment item that is designed to hold containers of oil and fuels. It is called a 'secondary containment item' because it is designed to catch the leaks and spill of the container's contents which rest upon it.

The spill pallets can come in a variety of sizes to accommodate multiple containers

Spill Pallets fits for

- 1 x 205 ltr Drum
- 2 x 205 ltr Drum
- 3 x 205 ltr Drum
- 4 x 205 ltr Drum
- 6 x 205 ltr Drum
- 8 x 205 ltr Drum
- 1 x 1000 ltr IBC tank
- 2 x 1000 ltr IBC tank

Spill pallets are suitable for Keeping IBC Tanks, Drums & jerry cans, the design incorporates a removable mesh for easy cleaning

Overpacks Drums

Drip Trays

Spill / Drip trays keep slippery spills off the floor by catching minor leaks and drips. It also suitable for storing small drums & jerry cans. Drip trays Available with sump capacity between 10 ltr to 100 ltr

Overpack drums are a type of protective packaging, to contain non-hazardous materials or provide outer protection

Covered Spill Pallet

Spill kits are used to clean up hazardous products like Oil, Chemicals so they do not contaminate land or water. Spill kit includes absorbent socks, pads, rolls, Drain plugs & disposal bag. **Oil spill kit & Chemical spill kit** are the most commonly used.

RAMP

The spill pallet ramp makes it easier to move drums on and off pallet. It makes easy to load drums onto a range of Spill Pallets

Storage Pallets Plastic plastic pallets

Pallets are an important part of the materials handling industry used in most aspects of the supply chain

Pallets make it easier to move heavy stacks. Loads with pallets under them can be hauled by forklift trucks of different sizes, or even by hand-pumped and hand-drawn pallet jacks.

Customers choose to use plastic pallets for a variety of reasons. The benefits of plastic pallets over wood are many and include durability, cleanliness, sustainability, and long-term cost savings

Plastic Pallet Styles Defined:

Rackable, Stackable, and Nestable plastic pallets.

Each style is designed to serve a general use or function

The Good

- Durable and long-lasting, which is cost-effective long-term
- No need to heat treat pre-shipment since bug-proof
- Weigh less than wood pallets (can reduce shipping costs)
- Smooth material is safer to handle
- Weather-resistant / easy to store and clean
- Recyclable (although less environmentally friendly than wooden pallets)

Stackable Pallet

One of the most important parts of handling your warehouse pallets is to make certain that the goods on them are stacked correctly. If they aren't, at best you'll be wasting

space. At worst, the products on the pallet could come tumbling down, damaging the items and even hitting a worker. One important rule when stacking on a pallet is to only stack goods that are a uniform shape and size

2 way Pallets / Racking pallet

Pallet racking is a storage system for pallets that used extensively in warehouses and manufacturing facilities. The racks are made from steel and extend high up toward the ceiling.

2 way pallets are recommended for racking purpose. Major material handling equipments can be used in 2 way pallets like stacker, fork lift, Hand pallet truck etc.

Hygienic Pallets

The hygienic pallets are easy to clean. Hygienic plastic pallets are very suitable for internal production, storage, storage in rack, conveyor belt, quick freezing and transport of heavy goods. They are characterized by closed deck and bottom and in moulded runners. Hygienic plastic pallets are mostly used in the pharmaceutical sector and in food productions. Hygienic plastic pallets have a long life time and they are constructed for heavy load

Plastic Crates

300 x 200 series
